

## Sources for Recommended Palm and Landscape Fertilizers

From Dr. Timothy K. Broschat, Ph.D.  
UF / IFAS Ft. Lauderdale Research & Education Center

**Reference:** ENH1009 Fertilization of Field Grown and Landscape Palms in Florida at <http://edis.ifas.ufl.edu/pdf/EP/EP26100.pdf> revised September 2014.

All products have an analysis of 8-2-12 (8-0-12 is also acceptable). **However, be aware that not all 8-2-12 analysis fertilizers meet our specifications.** Some of the companies listed below may sell 8-2-12 fertilizers that do not meet our specifications in addition to selling ones that do.

### Fertilizer Specification – can be used for palms AND entire landscape

- 8-2-12 +4 Mg with micronutrients OR 8-0-12 +4 Mg with micronutrients
- 100% controlled release forms of N, K and Mg
  - N (Nitrogen) – any form of 100% controlled release
  - K (Potassium) – Sulfur-coated Potassium sulfate
  - Mg (Magnesium) – Prilled Kieserite (slow release Mg Sulfate)
- Micronutrients in quick release or water soluble form
  - Sulfate form of Mn (Manganese) – e.g. TechMangam
  - Sulfate forms of Zn (Zinc) and Cu (Copper)
  - Chelate form of Fe (Iron) – e.g. Trachelene Fe
  - Slow release form of B (Boron) – e.g. Granubor

**READ THE LABEL** to make sure that the product you are interested in contains only the above slow release sources of N, K, and Mg and water-soluble micronutrients such as Mn and Fe. Otherwise you will get less expensive and potentially detrimental formulations.
