

Protecting Southwest Florida's unique natural environment and quality of life ... now and forever.

December 2, 2014

Mr. Gary McAlpin
Coastal Zone Management
Natural Resource Department
Collier County Government
2800 N. Horseshoe Drive
Naples, Florida 34104

Dear Mr. McAlpin,

Per our telephone conversation of last week Table 1 below provides my best estimate of the cost for two years of shorebird monitoring for the four nourishment projects for which the permits currently require shorebird surveys under on purchase order. If during the two year period that would be covered by the combined purchase order, more projects are completed and require surveys, the total cost would have to be adjusted. If you decide to proceed with a combined purchase order, I just need a date when the process is completed and I'll be able to start the surveys. The existing Naples Beach Nourishment purchase order has enough funds remaining for me to continue those surveys through January 2015. The Wiggins Pass and South Marco Island purchase order are currently zeroed out. I don't know the status of the Central Marco Island Nourishment Project and when those surveys might be starting.

These costs are based on 20 surveys being conducted at each location annually. If, for some reason, the frequency of one these one is required to increase due to permit requirements, the additional surveys would be charged on a per survey basis.

If you need any additional information, just let me know.

Sincerely,

David S. Addison
